RE: Your Patient

I had the pleasure of seeing your patient for consultation today. At the request of the primary eyecare provider, your patient was referred to the Eye Institute Low Vision Center to evaluate rehabilitation potential for visual impairment due to congenital glaucoma and history of retinopathy of prematurity.

Your patient previously participated in vision rehabilitation/therapy and has recently had positive response to light stimulation in the right eye. I am referring your patient for possible vision rehabilitation. Please continue with light stimulation as previously prescribed. Traditional syntonics plan is as follows:

- * 20 minute sessions on at least 3 consecutive days per week
- * White light is directed through a colored absorption filter.
- * The patient views the glowing circle from a distance of approximately 50 cm in a dim room, with Blue/green, yellow/green, and indigo/red filters can be used in 10 minutes cycles.

Please let me know if I can be of further assistance.

Sincerely,
